Skills

- **Frontend** React.js , Next.js , Vite.js , Typescript , React Redux , RTK
- **UI Frameworks** Tailwind , MUI , Ant Design , React Bootstrap , Shadcn , React Suite
- **Backend** Node.js , Express.js , Mongo DB , MySQL , C#
- **Deployments** Shared Hosting , VPS , AWS , IIS

Experience

Project Development Manager and Developer

↗ [LastingSales](#)

Feb 2023 – Present

- As a Project Development Manager, I've successfully converted the lead distribution system from a React to a fully functional project in Next.js 14.
- Managed full project life cycle, from design to deployment and maintenance, optimizing processes and reducing development time.
- I successfully launched the project within 6 months, running it in parallel with its alpha version. This achievement underscores my commitment to delivering high-quality projects within challenging timelines.

Full Stack Developer

↗ [Brisk Solutions \(Pvt.\) Ltd.](#)

Sep 2019 – Feb 2023

- Unified various .NET and MSSQL projects into a single platform using React, Node.js, and MySQL, integrating modules for financial, inventory, payable and receivable, real estate management, and user security (roles and permissions).
- Created detailed technical documentation and conducted training sessions for administrators and end-users, ensuring effective system understanding and utilization.
- Improved system efficiency and user satisfaction, leading to a 30% increase in operational productivity and a significant reduction in maintenance costs.

Projects

↗ [Lead Management CRM](#)

Feb 2023 – Present

Tech Stack

Next.js , TypeScript , Laravel , MySQL , AWS

Project Brief

- The project consolidates and manages leads, assigns them based on performance, provides follow-up reminders, supports custom data fields, integrates call logs, and consolidates leads from Facebook, websites and Import CSV, while offering customizable sales funnel stages and workflows.
- Accomplished improvement in code quality and a 25% reduction in development time by introducing TypeScript, enhancing coding standards, and replacing traditional pagination with infinite scrolling.
- Delivered a more customized and unique user experience, providing greater flexibility and control over the application's UI/UX, and improving developer productivity and the strength of the codebase.

Tech Stack

React.js Node.js , MySQL , IIS

Project Brief

- Implemented a comprehensive financial module enabling interactive viewing and printing of financial statements, enhancing financial reporting and analysis capabilities.
- Developed various modules for streamlined financial transactions management, integration with production modules, importing sales orders, inventory management, specialized production modules, real estate management, installment plans, document management, and receipt management, catering to diverse business requirements.
- Deployed projects on Windows Server IIS to ensure reliable and efficient web application hosting and management.

⇒ [PharmEx DMS](#)

June 2021 – Nov 2021

Tech Stack

React.js Node.js , MySQL , Shared Hosting

Project Brief

- This project is a pharmacy distribution management system. It features a dashboard for managing orders, stock, delivery, and financial records, automating medicine deliveries and tracking reports.
- Improved inventory and financial tracking, increasing efficiency and accuracy. This was achieved by using batch-wise tracking and detailed ledgers.
- Built a strong reporting system for sales, purchases, and stock levels, helping in better decision-making. Streamlined delivery processes and improved management efficiency in pharmacy distribution.

Freelance Projects

- Developed **Hospital Management System**, in which i created transaction modules for OPD and IPD checkups, billing, and prescriptions, improving patient management. Each module is equipped with detailed reporting capabilities, ensuring thorough and efficient management of hospital operations.
- Contributed to **Doctors Hub**, an online doctor appointment system featuring modules for Doctors, Patients, Hospitals, Labs, Pharmacies, and an Admin Panel.
- Developed **Fine Transport** , a system designed to manage transportation operations. You can define drivers and vehicles, track each driver's trips and vehicle expenses, and set routes for drivers. The system includes separate panels for drivers and customers, allowing customers to request transport services. Additionally, it features detailed reporting and a module for user roles and permissions.
- Developed **Stock Keeper** , a system designed to manage inventory, purchases, and inventory usage. It features a dashboard showing the most consumed and purchased items, along with detailed reports for each module, ensuring efficient inventory management and clear analytics.

Education

Masters (Computer Science)

B.Z.U Multan 2017 – 2019
